

Press Release

eWON unveils Talk2M Go, the new enhanced remote maintenance platform for OEMs, machine builders and system integrators

Talk2M Go provides machine builders and system integrators with a professional Internet remote maintenance platform. It provides secure on-demand access to hundreds of remote machines and devices. Combined with eWON industrial routers, it facilitates perfect integration with a large variety of Modbus devices.

March 2010, Braine-l'Alleud, Belgium – eWON announces a new version of its Internet remote access and maintenance platform, Talk2M Go. Talk2M Go provides a professional remote maintenance platform with all the security, reliability and traceability required by industrial applications.

Talk2M Go is hosted on a mission-critical Internet provider and is covered by a service level agreement (SLA). Talk2M Go has a guaranteed bandwidth of 500 kbps, with 1 Mbps burstable.

Talk2M Go enables up to three users to access one or several machines at the same time, with fully detailed connection reports itemized by machine available every month.

With a pay-per-use pricing model, Talk2M Go minimizes operating cost as well as initial investment. It shortens project go-live time and time to market. Single-click upgrade to Talk2M Pro secures user investment and makes Talk2M Go an excellent entry-level platform.

About eWON

eWON sa, a member of the ACT'L Group, is a Belgian electronics company and manufacturer of the eWON product line. Since its launch in 2001, eWON has become a worldwide market challenger for intelligent Ethernet gateways and industrial IP routers. Thanks to growing market recognition, the eWON concept and Talk2M service have become a reference and a quality standard for every major company in the industry.
